

# TOWING & RECOVERY

## Remote Tow Truck

This is a tow truck where the driver would do all the work in less than half a minute without leaving his warm clean cab. The driver just picks the car and drives away. This method reduces the cost and gives more operations per hour; it is a better return on investment.

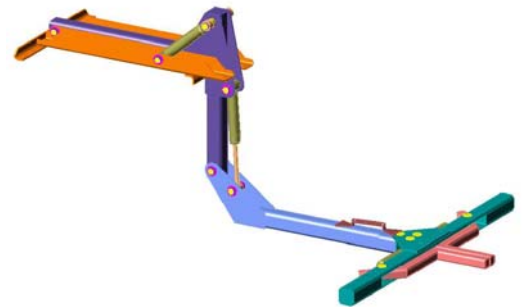

RTT 3

## Remote Tow Boom Kit

This a kit that could be installed on an available pick up or a locally made platform to convert it to be a remotely operated tow truck where the driver will stay in his warm clean cab and fulfils his tasks in less than half a minute or even less. The driver will give more operations per day also in better working conditions. This kit is delivered with DC hydraulic power pack; it is a concept of plug and play and will allow anybody to start a towing business.

RTBK 3

## Tow Truck

Standard classic wrecker that is used for continuous operation with capability for under carrying lifting to avoid damaging new low approach angel autos who are usually made of fiber glass.

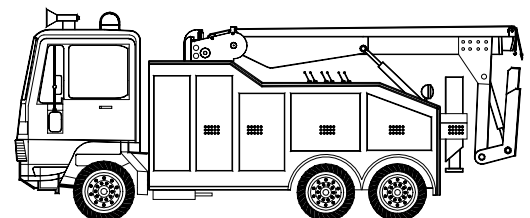

TT3 & 5 & 8

## Heavy Recovery

Heavy-duty recovery truck for use with buses with delicate front and long front over hang. This is also used to recover loaded trucks of 35 Ton GVW.

# TOWING & RECOVERY

## Heavy Recovery Kit

Heavy-duty recovery kit for use on top the fifth wheel of a truck tractor for recovery of buses with delicate front and long front over hang. This is also used to recover loaded trucks of 35 Ton GVW (this is dependant on the used truck tractor).

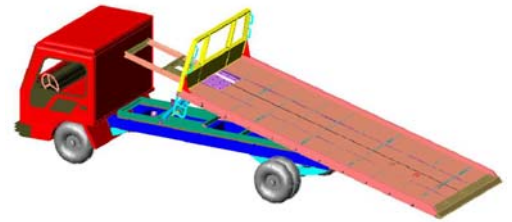

HRK 10

## Sliding Platform Recovery

Rescue vehicle for damaged vehicles that cannot be pulled. The upper platform tilts to 13 – 20° then slides down to the ground. The winch on top of the platform pulls the damaged vehicle to the top. The platform returns to its original position, while the damaged vehicle is properly fastened to allow safe long transportation.

SPR 3

## Tilting Platform Recovery

Rescue vehicle for damaged vehicles that cannot be pulled. The upper platform tilts to 17 – 20° and in the mean time rolls down to the ground. The actual angle depends on the ground surface condition. The winch on top of the platform pulls the damaged vehicle to the top. The platform returns to its original position, while the damaged vehicle is properly fastened to allow safe long transportation.

TPR 3

## Wheel Clamp Unit

Locks the wheel completely and holds the car in position. The police uses these clamps for cars parking in unauthorized locations. Proven reliability in tough Egyptian police conditions.
